NARCAN

NALOXONE

Saves Lives

www.525foundation.org

Notice the signs: Unresponsive, shallow breath and heart rate, clammy skin, and bluish lips and nails

**DO NOT WASTE TIME!
ACT IMMEDIATELY!!**

Turn the person onto their side to alleviate the risk of choking on vomit.

DO NOT attempt to "walk" the person around, force feed them anything, make them drink water, or put them in the shower

Administer a dose of **NARCAN**, if you have it on hand, then call 911 immediately. Keep a second dose handy and administer that as well if the first does not "take". Once awake, the person may be experiencing withdrawal symptoms, so it is important to make sure they get the medical care they need to avoid immediate relapse.

If you **DO NOT** have a dose of **NARCAN** available, **call 911 IMMEDIATELY!** Stay on the line, follow the operator's instructions, and wait for medical help to arrive. Even if you are under the influence or if there are other substances lying around, if Good Samaritan Laws are in effect in your state, you will be protected from prosecution.

Break the **STIGMA**

The only thing Narcan enables is
BREATHING
